Highlights

Choreograph your launch with a combination of fanfare, online and printed materials, and change management to ensure your new collaboration platform is off to a great start.

Activities can include:

- launch landing page
- cheat sheet for printing
- graphic design support for launch swag
- working with your change management team
- user training and on-boarding plan

The process will follow interview, discovery, implement, test, and refine iterations. Actual time spent will be logged against the allocated [Service Punchcards](#), and specific work will be directed by you.

Covered by the [Service Terms Agreement](#) (sorry, no alterations or substitutions). Licenses for software products are not included.

Pricing

Per-Project Estimates given in Service Punchcards... [Contact us to get started](#)

Ground Rules

Interviews and interactive sessions will be delivered remotely via web-based screen share by BrikIt experts (information architects and designers). Based on your preference, implementation will be performed on BrikIt's portal or your systems. Time required to gain access to your systems (include account setup, virtual private network access, and other on-boarding) will be logged against your Service Punchcards.

Launch Planning and Service Punchcard tracking will be supported with your private portal (Confluence space) on our servers, which includes up to three user accounts. Your portal will be maintained for one year after completion of last service package or service punchcard. User accounts inactive for six months will be automatically disabled (simply contact us to reactivate).
