Beyond the Basics

Labels

Documentation

Search is an integral part of how users will find what they want on your site. Labels (known to some as tags) are how searches are made effective. Without accurate labels, searches will often produce too many or too few results.

Searching

Documentation

Searching is a critical way that users will find the content on your site. The out-of-the-box search of Atlassian Confluence is quite effective, and made more so, when users label their content accurately and effectively.

Helpful Next Level

All things Page Editing: Take it to the next level.

Next Level

Editing Pages

Documentation

With Theme Press, all your content lives in blocks. You'll work on the content by editing individual blocks. Just click a pencil icon and you're there.

Advanced Page Design

Documentation

Beyond the basics of editing a page, there are many options to make your content more engaging for users.

Macro Reference Guide

Documentation

Theme Press installs with macros that help you create and design content. You can use these macros on individual pages or architect pages.

Creating Presentations

Theme Press 1.5 introduced the ability to turn Confluence pages into a slide presentation.

Designing for Mobile

Documentation

The mobile features in Theme Press allow you to create responsive and adaptive page designs.

Helpful Site Design

Learn more about visual and information design.

Site Design

Templates and Blueprints

Documentation

Template pages are pre-structured pages that are maintained on a space or site level. Their purpose is to make it easier for users to create content that stays consistent in form and structure

Site Design

Documentation

The process of designing your site is a comprehensive one. The two major components are information design and visual design.
