Downloading a Theme

Requires

THEME PRESS

Downloading a Theme

Prompt

Exporting a theme from your environment.

Outcome

When moving a theme from one environment to another (such as from staging into production), the first step is to download the theme.

Steps

In a Theme Press-enabled space, open the Theme Designer

Theme Press Control Panel Theme Designer Theme Tab Themes Manage Themes
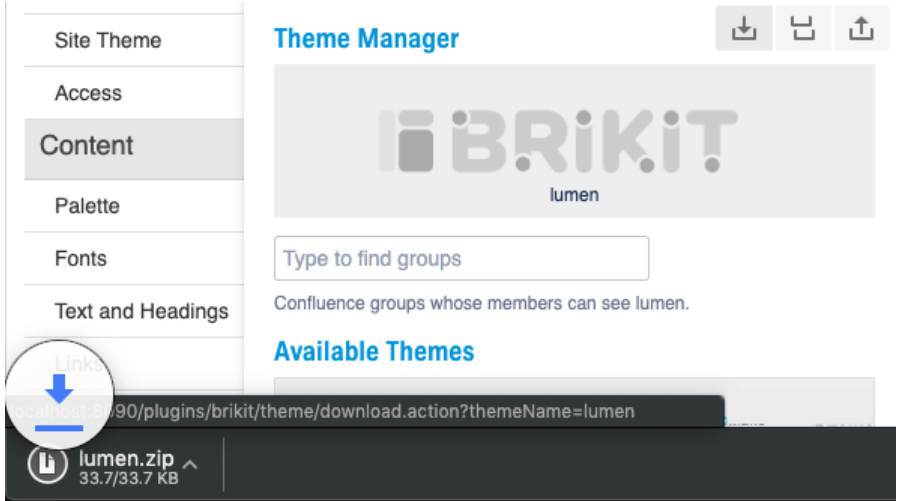

Click the magnifying glass

This will appear to the right of the Installed Themes setting.

Select a theme for downloading

Click on the theme in the Available Themes list at the bottom of the window.

Click the download button

Note

⚠️ If you already have a same-named theme zip in your downloads folder, your operating system will likely add a number to the naming of the new copy. For best theme management practice, we recommend removing the number before uploading.
