Layout

Prompt

A type of [architect page](#), which determines overall content layout, as well as visibility of certain page elements. Also known as a Page Design.

Definition

The **layout** is a key underlying structure, which not only controls the content of your page, but also determines specific page elements that will appear on every page using the layout. Page designs help to maintain visual consistency across your entire site.

[Page elements](#) affected by a **layout** include:

- [Breadcrumbs](#)
- [Page Metadata](#)
- [Page Title](#)
- [Page Information](#)
- [Likes and Labels](#)
- [Comments](#)
- [Page Toolbar](#)
- [Navigator](#)

While Theme Press comes with [preconfigured layouts](#), you can edit them to suit your purposes at any time, or create your own.
