# Built-in Layouts

## Prompt

Preconfigured page [structures](#), a type of page design, included with product install.

## Reference

Name	Description	Layout
Announcement	Highly designed and optimized for short articles, announcements, news, and blurbs. Hides all <a href="#">page elements</a> , but adds a merged layer with <a href="#">Page Title</a> , <a href="#">Formatted Date</a> (@created), and <a href="#">User Info</a> (@creator) macros.	
Basic Confluence	As close to Out-Of-the-box Confluence as possible, and therefore optimized for users most familiar with the Confluence Wiki style. The <a href="#">page toolbar</a> is visible in the header. Layout shows all page elements, including <a href="#">Navigator</a> . Based on the Elastic (100% width) layout. This is a <a href="#">blockless</a> page, so optimized for concurrent editing.	
Community	Optimized for collaboration, showing community features such as "likes" and "comments". Use of this layout can help ease the Confluence learning curve, enabling users to start as page viewers and then feel encouraged to contribute through comments. Layout shows all page elements except the <a href="#">page toolbar</a> . The width is fixed to 1100px.	
Documentation	Optimized for consumers of long form text content such as articles, reports, and policies. Page title, page info, labels, and navigator are all shown by default.	
Landing Page	A preconfigured layout that has been optimized for site and space home pages (or sub-landing pages). Like the "Clean" layout, all the page elements are hidden by default, giving full design control to designers and architects.	
Elastic ( <i>Deprecated</i> )	Similar to the Handbook layout but expands and retracts as the browser changes size.	
Slide ( <i>Deprecated</i> )	Simple layout that shows page title, breadcrumbs, and page info. Useful as presentation slides.	
Blog ( <i>Deprecated</i> )	Simple layout that contains the <a href="#">Blog Tree macro</a> in the right column. Also shows page title, page information, likes and labels, and comments.	
Clean ( <i>Deprecated</i> )	Blank slate from which to start your design. <a href="#">Page elements</a> are hidden. Optimized for designers who want complete control over the appearance of all elements.	
Handbook ( <i>Deprecated</i> )	Documentation-style layout that contains the <a href="#">Page Tree macro</a> in the left column. Also shows page title, breadcrumbs, page information, likes and labels, and comments.	
Unsocial ( <i>Deprecated</i> )	Similar to the Handbook layout minus likes, labels and comments.
