Applying a Theme to a Space

Requires
THEME PRESS
Applying a Theme to a Space

Prompt
Give your space a look and feel unique from the default site theme.

Outcome
There may be situations where you’d like a specific space to have a different theme than the rest of the site. Instead of changing the default site theme, the steps below describe how to apply a theme to just one space.

Steps
1. Open the Theme Press Designer by pressing the "." (period, full stop) key.
2. Click on the Architect Tab.
3. Expand the Space Theme accordion.
4. Click the Use Space Theme button.
5. Click the magnifying glass to the right of the Space Theme setting.
6. Select a theme from the Available Themes section.
7. Click the OK button to confirm the change and wait for the theme to update.

Note
If you don’t see the Architect tab when you open the Designer, it likely means you do not have permissions set up to do so. Contact your Administrator, who can grant access to this tab.
