What is Content Flow?

Brikit Content Flow offers easy business workflows for Atlassian Confluence. Take control of your content, keeping it fresh and relevant with streamlined approval and publication workflows, scheduled content releases, and planned archiving.

The screenshot shows the Brikit Content Flow interface within a web browser. The browser's address bar shows "SPLASH" and navigation links for "LOCATIONS", "PEOPLE", "CULTURE", "NEWS", and "VANILLA". The main navigation menu includes "Overview", "Permissions", "Content Tools", "Look and Feel", "Integrations", and "Add-ons". The "Add-ons" menu is expanded, showing "Available Workflows", "Workflow Status", "Review and Archive", "Archived Pages", "Scheduled Pages", and "Audit Bandana".

Available Workflows In Space

Name	Type	Visibility	Pages	Reviewers	Labels	Automatic	Actions
My Publishing Workflow	Publishing	All Spaces	0	A horizontal line with three dots representing reviewers. Below the line are icons for "Editor", "Dave", "Tester", and "Kelli". A "StepLabel" box is positioned below the line.	Workflow Label	<input checked="" type="checkbox"/>	
Page Preview	Publishing	All Spaces	0	A single dot representing a reviewer. Below it is an icon for "Editor".		<input type="checkbox"/>	

[+ Workflow](#) Disable workflows for this space

The screenshot shows a Confluence page with a purple header. The header contains the 'SPLASH' logo, navigation links for 'LOCATIONS', 'PEOPLE', 'CULTURE', 'NEWS', and 'VANILLA', and a search bar. The main content area has a teal header with the title 'Dispatches From Our Offsite'. Below the title, it shows the date 'Friday, November 8, 2019' and the author 'Dave Alston'. A content flow overlay is visible on the right side of the page, showing a 'published' status and options to 'Approve/Reject' or 'Remove Workflow'. The main content of the page is titled 'Day One Activities' and contains a paragraph of placeholder text. Below the text is an image of four people sitting around a wooden table, looking at a tablet and a laptop.

How Content Flow Works

The Content Flow app integrates seamlessly with your Confluence instance. For an approval or publication workflow, the app adds restrictions to your content, based on the workflow path you design, and only releases those restrictions when the appropriate users have approved the content. Alerting users when their approval is required, Content Flow adjusts restrictions and passes content forward (or back, if unapproved) according to the workflow rules. For scheduling, Content Flow applies restrictions that are set to your timeline and publishes as you desire. For archiving, the app sets up a review flag that is tied to your timetable, and based upon the reviewer's actions, either resets the clock, or moves the content to a chosen location.

What You Can Do

Workflows

Review, track, notify, and forward content to automatically collect feedback, route information, and manage approvals.

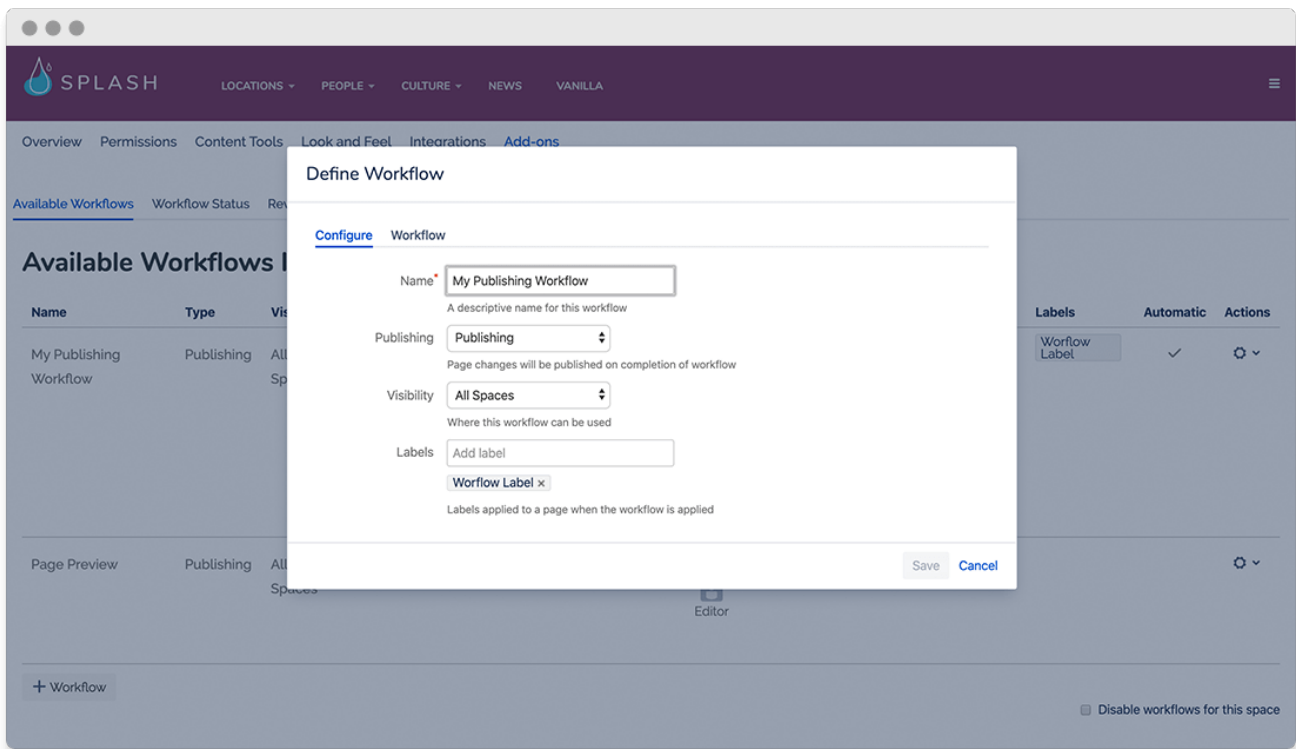

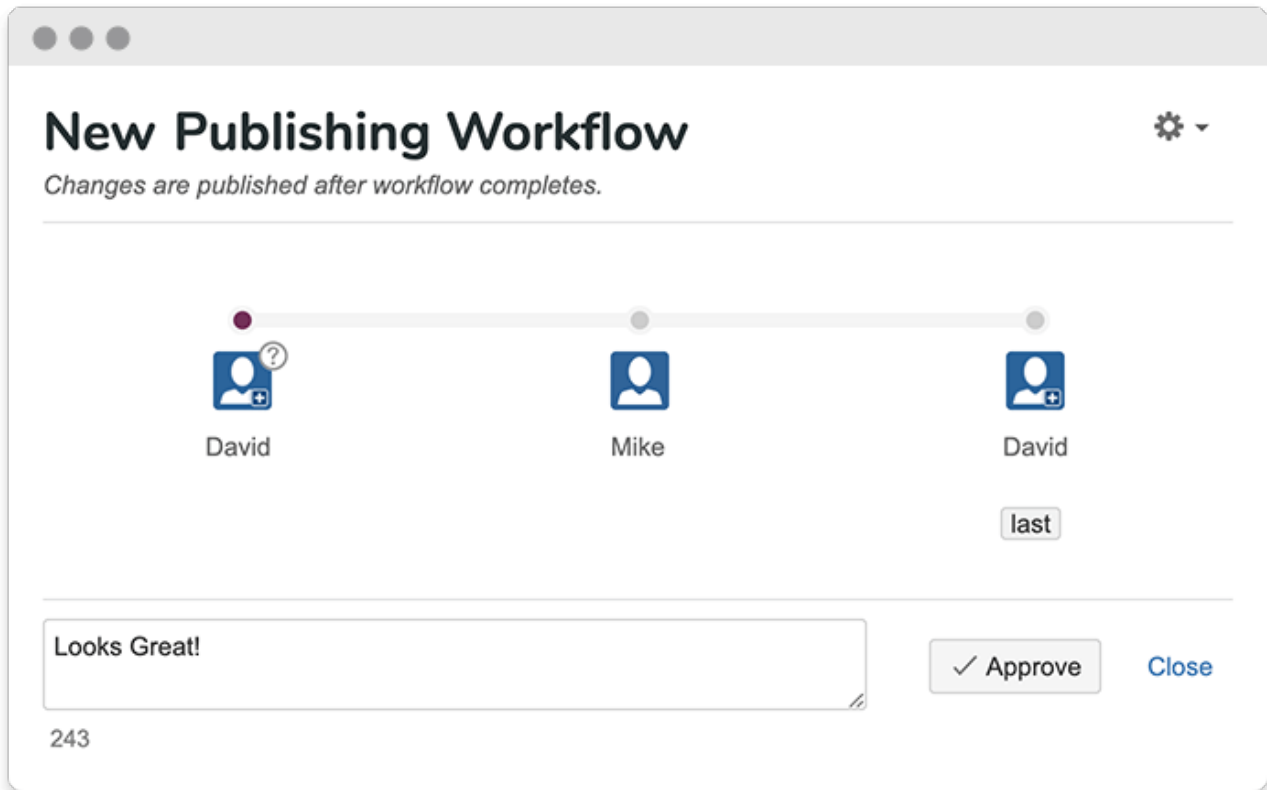

- Keep content hidden until fully approved with publication workflows.
- Ensure specified users or groups have eyes on content with routing workflows.
- Define as many stepped reviews as you like, in the order you wish.
- Apply labels at each review step, leveraging control and search of content.

Archiving Policy

- Control archiving reviews with specified timeframes for review.
- Predetermine outcomes depending upon if the review is completed.

Scheduling

Set specific dates and times for publishing and archiving of content.
