

Blocks

Relates To

THEME PRESS

Blocks

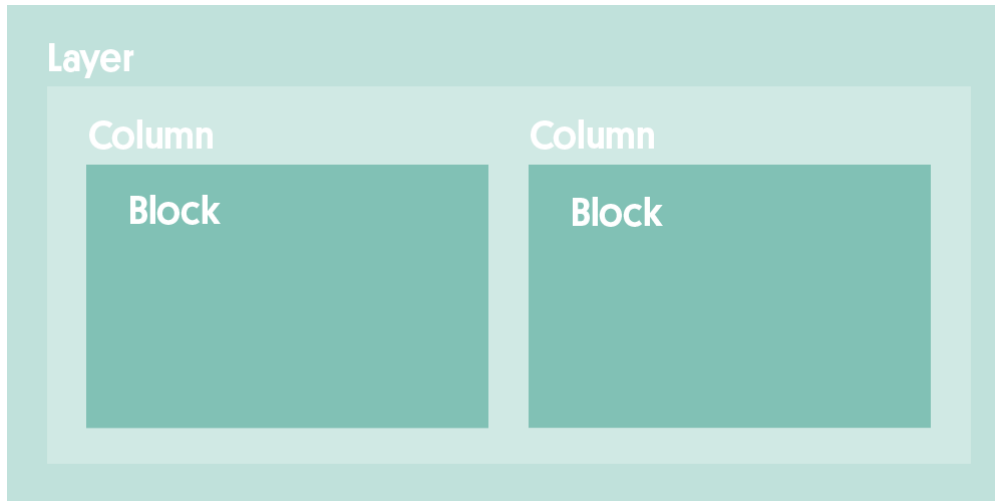

Prompt

Designable and separately editable units of content.

Definition

Blocks are editable content containers, and reside within columns and layers, the building blocks of any Theme Press page.

- One or more blocks exist in a [column](#).
- One or more columns live within a [layer](#).

The [Block Edit](#) feature in Theme Press allows you to zero in on content one block at a time, versus editing an entire page in one go.

Blocks can be:

- formatted and styled
- dragged and dropped to other areas of a page
- automatically displayed (included) on other pages
