

Confluence Advanced Search Page

Confluence Advanced Search Page

Prompt

Search page with default Confluence search filters.

Definition

Confluence's advanced search page is the interface that allows users to narrow their search by using default Confluence search filters such as content type and last modified date.

Direct URL:

<your [Confluence base URL](#)>/dosearchsite.action

For more information about how this works, please see

[Atlassian's advanced search documentation](#).

Info

For users with [Brikit Targeted Search](#) installed, Confluence's advanced search page is not the same thing as the [Targeted Search advanced search page](#). These two pages may look similar but it is only on the Targeted Search advanced search page that users can view and use custom [filter groups](#) and [filters](#).
