TARGETED SEARCH

Targeted Search Link Macro

Prompt

Display search results for a specific search term.

Definition

This macro displays a text link or button that links to that links to [Brikit Targeted Search's search page](#).

The initial search runs with parameters, including the search term(s), that you can set through the configuration options in the macro, allowing for a more focused, narrower search. Both Confluence search filters and Targeted Search filter groups and filters in the sidebar of the search page will be displayed and/or pre-selected according to your configuration.

You can also control the width of the button (if selected) as well as how many search results are displayed.

Info

This macro has many of the same capabilities as the [Targeted Search Field macro](#). The most salient distinction between the two macros is that, with this one, you can define the initial search term(s).
