

Filters

Relates To

TARGETED SEARCH

Filters

Prompt

Predefined labels for identifying, organizing, and filtering site content.

Definition

Brikit Targeted Search filters are essentially [Confluence labels](#) with a few important enhancements:

- Filters can have a "human-friendly" name (e.g. *Human Resources*) for the labels they represent (e.g. *human_res*.)
- Filters are organized into [filter groups](#)
- Filters can be subcategorized into [nested hierarchies](#)
- Filters are used to refine Targeted Search results in the [Search Panel](#)
- Filters can be [promoted](#) so that they show up at the top of lists
- Filters can be [cascaded](#) so that child pages are automatically labeled
