Label Select Field Macro

Prompt

Provides a pre-structured list of labels.

Definition

This macro allows you to control the available label options for consistency. It displays a dropdown from which users can select labels and apply them to a space, page, or blog post.

- Ability to select filter groups you'd like to display
- Toggle between filter group name or a custom title
- Ability to apply labels as space categories instead of page labels
- Ability to define a filter group from which users can select filters to apply to the page
- Ability to disable search links
- Formatting configuration options
