# Adding Macros to a Page

## Prompt

Adding pre-built features and functionality to any page.

## Outcome

Access and select from the macro browser or insert a specific [macro](#) by name or [key](#).

## Steps

### Option 1: Macro Browser

While editing a page, you can access the macro browser in any of the following ways:

- Keyboard shortcut:
  - **Mac**: command + shift + a
  - **PC**: control + shift + a
- Type "{" and then choose the "Open macro browser" option from the Macro suggestions menu; or
- [Via the editor toolbar](#).

Select and configure the macro of your choosing.

### Option 2: Direct Embed

If you already know which macro you would like to use, while editing a page you can insert a specific macro by typing "{" followed by the first few letters of the macro name or key. The macro should appear in the Macro suggestions menu.

Select and configure the macro.
