Blueprints Menu

Prompt

Interface for creating a space or page from an existing [Blueprint](#).

Definition

The Brikit Blueprints Menu is a modal window that displays all of the [Brikit blueprints](#) that are available to the user in the current context. It is [accessible in the Confluence Header](#).

Blueprint titles and descriptions in this menu are determined by values entered in the [blueprint definitions JSON file](#).

In this menu, you can select an existing Blueprint and begin the process to create a new space or page based on the selected Blueprint. Sometimes, we refer to this process as the 'Blueprint wizard,' a step-by-step process that asks you to input any [substitution fields](#) and that generates a new space or page (depending on the Blueprint selected).

The Blueprints Menu also allows you to [regenerate a page](#) (if it was created from a Blueprint) or to [copy a space or page](#).
