THEME PRESS

Theme Design

Prompt

The practice of defining how your site will look and feel.

Definition

Theme design (or "theming") is the practice of developing a [theme](#) for your Confluence site with BrikIt Theme Press.

When you develop a theme, you can make decisions about:

- What [colors](#) will be included in your theme and how they will be used
- What kinds of fonts will be used
- How plain text, links, and images will be presented
- Any [custom CSS](#) or [JavaScript](#) that you may choose to add
- What types of users will see the [Confluence Header](#), [Page Tools Menu](#), and [Sidebar](#) by default
- How pages printed from your themed site or [space](#) will appear

You can also make decisions about the appearance, sizing, positioning, and/or styling of the following:

- Space or site banners
- The Confluence Header
- The [Confluence Page Tools Menu](#)
- The [page canvas](#)
- A page's [header area](#), including any [Theme Press header](#) content
- Logos
- The [Confluence search box](#)
- The [Simple Toolbar](#)
- Menus created from architect pages
- A page's title area, including how page titles appear in layouts that include them
- Breadcrumbs
- Page creation and modification date information
- Content layers
- Content columns
- Content blocks
- Tabs of tabbed blocks
- Expander block triggers
- Blocks configured to "spin"
- Page label display and "like" interface, plus the surrounding area that encapsulates both
- Page comments and their surrounding area
- A page's footer area, including footer content and block design

Theming also allows you to control the look and feel of the following macros:

- Action Button
- Block Link
- [Blog Posts](#)
- Catalog Navigator
- [Expand](#)
- [Page Tree](#)
- [Recently Updated](#)
- Rotate Content
- [RSS Feed](#)
- Space List
- Topic Tree

Any of the above can be configured in the [Theme Designer](#) by any member of a user group that has been granted permission to access the [Theme tab](#) in the [Theme Press Control Panel](#).
