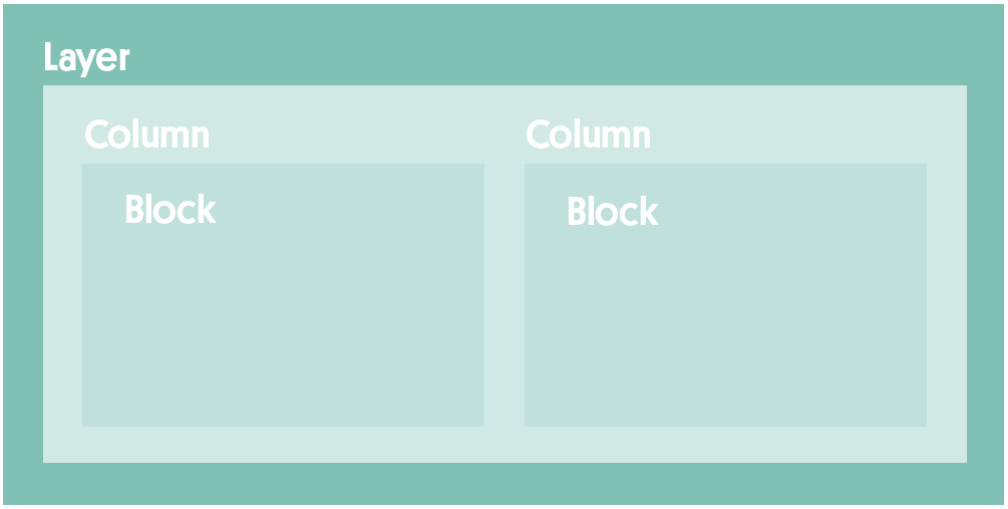
THEME PRESS

Layer

Prompt
A design structure that houses all columns and blocks.

Definition
Layers are one of three components that Theme Press uses to divide a Confluence Page. Layers are the first level of these divisions, and act as containers for all columns and blocks.

- One or more layers can be added to a page
- One or more columns live within a layer
- One or more blocks exist in a column



There are a multitude of ways to style or adjust the format of layers in the theme and on the page using the Theme Press Designer.
