

Creating a Layout

Requires

THEME PRESS

Creating a Layout

Prompt

Constructing a [Layout](#) to meet your content display needs.

Outcome

Creating custom [layouts](#) can help tailor a site's look and feel for specific content. You can design unique page structures and formatting, and control [page elements](#) for positioning and display.

Steps

Open the [Theme Press Designer](#) and click the **Space Tab** and open **Page Design**

Theme Press Designer Space Tab Page Design

Under the list of existing layouts, click 'Create'

Add a Name and click '+Layout'

The screenshot shows the 'Space Architect' interface. At the top, there's a header with 'B' and navigation icons. Below it, three tabs are visible: 'Page', 'Architect' (selected), and 'Theme'. The main content area is titled 'Space Architect' with an information icon. A list of layout options is shown: 'Space Theme', 'Space Logo', 'Banner', 'Header', 'Menu', and 'Page Design' (highlighted). Below this list, there's a 'Use Site Design' and 'Use Space Design' toggle. A message box states: 'This space is using the Handbook page design.' At the bottom, there's a 'Create' button and a 'Name' input field. Below the input field, there are two buttons: '+ Frame' and '+ Layout'.

This action creates a copy of the existing default (site-wide) page layout that you can then edit and customize according to your needs. This new layout is an [architect page](#) that lives in the [Theme Press Default Space](#).

Note that selecting '+Frame' creates a full-width page layout that's best used in cases where you want an entire page to be loaded as in an iFrame.

Customize the layout

On the newly created architect page, open the [Theme Press Designer](#) and click the "Layout Tab". In this tab you may add or remove [layers](#), [columns](#), and [locks](#) as you see fit.

Customize the page elements

While in the Layout Tab in the Theme Press Designer, you can also click "Page Elements" and make selections on whether to show or hide certain items, including:

- [Breadcrumbs](#)

- [Page Metadata](#)
- [Page Title](#)
- [Page Information](#)
- [Likes and Labels](#)
- [Comments](#)
- [Page Toolbar](#)
- [Navigator](#)

Use this Layout on your site

You may now enable this Layout on a page (or as a space or site default). See [Changing the Layout Design](#) for instructions.
