

Deferring Block Loading

Requires
THEME PRESS

Deferring Block Loading

Prompt

Speeding up page loads by specifically targeting blocks containing slow-loading content.

Outcome

Deferring block loading renders the content of a block after initial page display, which can improve page load times.

Steps

Navigate to the Specific Block

Theme Press Control Panel Page Tab Block Handling

Check the Defer Loading option

Note

Not all block content can be deferred successfully.

Because some macros rely on page initialization, functionality should be tested after enabling the Defer Loading option.

Tip

Use deferred block loading to render a specific block every time a page is viewed, regardless of the [Instant Page Cache](#) setting.
