Moving the Search Box

Prompt

Changing the position of the search box by moving it into the [Theme Press Header](#).

Outcome

By default, the [Confluence search box](#) lives in a fixed position in the [Confluence header](#).

If you would like to have more control over the positioning, sizing, and styling of the search box, however, or if you plan to restrict user access to the Confluence header, you may move the search box into the Brikkit [Theme Press header area](#) as part of your [theme design](#). Once the search box is moved into the Theme Press header, you will be able to position it.

Steps

Move the search box into the Theme Press header

[Open the Theme Designer](#) and navigate to the search box placement controls:

Theme Designer HTML Structure Canvas Header Layer Search Box Placement ☐ Header checkbox

Position the search box as you wish

Directly below the Header checkbox, you will see four controls to further customize the positioning of the search box.
