Embedding Web Fonts

Requires

THEME PRESS

Embedding Web Fonts

Prompt
Including licensed font files in your theme.

Outcome
You may have a set of font files licensed for your organization for web use. In order to add them to your theme's font families, you must first add them to your theme.

Steps
Add the font files to your Confluence home directory.

To complete this step, you must have access to the server/computer on which Confluence was installed. You should have your set of purchased font files accessible.

- From your Confluence `home` directory navigate to `brikit/themes.`
- Select the folder that matches the appropriate theme.
- If not already there, add a `fonts` folder.
- Within the `fonts` folder, add your font files:
    - `.eot`
    - `.svg`
    - `.ttf`
    - `.woff`
    - `.woff2`

Add custom supporting CSS to your Theme.

Your packaged web-font files will contain key information needed to create a CSS file, including:

- font-family name
- font key
    - The name of your font file (minus the extension) is the font's key.
- font style
- font weight
- font ID
   - You can find the font ID in the .svg file.

Once you have located the key information, add a CSS file named `embedded-fonts.css` with the following format for each font:

| Format |
| --- |
| `#embeddedFontFace("<font-family name>" "<font key>" "<font style>" "<font weight>" "<font id>")` |

Example

`#embeddedFontFace("Graphik Bold Web" "Graphik-Bold-Web" "normal" "bold" "Graphik-Bold-Web")`

CSS Files

<div style="text-align:right">+   ⬆   Save   ✕</div>

```
/*Platform Light*/
#embeddedFontFace("Platform Web" "Platform-Light-Web" "normal" "100" "Platform-Light-Web")
#embeddedFontFace("Platform Web" "Platform-LightItalic-Web" "italic" "100" "Platform-LightItalic-Web")

/*Platform Regular*/
#embeddedFontFace("Platform Web" "Platform-Regular-Web" "normal" "400" "Platform-Regular-Web")
#embeddedFontFace("Platform Web" "Platform-RegularItalic-Web" "italic" "400" "Platform-RegularItalic-Web")

/*Platform Medium*/
#embeddedFontFace("Platform Web" "Platform-Medium-Web" "normal" "700" "Platform-Medium-Web")
#embeddedFontFace("Platform Web" "Platform-MediumItalic-Web" "italic" "700" "Platform-MediumItalic-Web")

/*Platform Bold*/
#embeddedFontFace("Platform Web" "Platform-Bold-Web" "normal" "900" "Platform-Bold-Web")
#embeddedFontFace("Platform Web" "Platform-BoldItalic-Web" "italic" "900" "Platform-BoldItalic-Web")
```

<div style="text-align:center">embedded-fonts.css</div>

Note

⚠ Theme Press does not accept OpenType Font (.otf) files, so we recommend converting these to one of the above-mentioned font formats, specifically **.ttf**, **.woff** or **.woff2**.
