

Monitoring Page Rendering Performance

Requires

THEME PRESS

Monitoring Page Rendering Performance

Prompt

Tracking the time it takes for pages to load.

Outcome

Enabling this feature allows you to track page performance via performance logging.

Steps

Access the hidden Admin UI

Your Confluence Base URL/admin/darkfeatures.action

Enable the dark feature `com.brikit.themepress.profiling`

Site Dark Features section

Enable **DEBUG** logging for `com.brikit.themepress.profiling`

Confluence General Configuration Administration Logging and Profiling

TO DISABLE:

1. Access the hidden Admin UI Your Confluence Base URL/admin/darkfeatures.action
2. Click "**remove**" for `com.brikit.themepress.profiling`

Note

- Requires Confluence Administrator permission
- Enabling **Page Rendering** will create a large number of log entries. **Use only for test environments**, or during low-usage periods in production environments (such as nights or weekends).
