

Color Palettes

Color Palettes

Prompt

A pre-defined set of colors in a [theme](#).

Definition

In any theme, a palette of pre-defined colors is determined for easy user access, allowing color use to stay true-to-brand. Additionally, these palettes determine how color selection cascades out into overall [theme design](#).

There are three different palette areas:

The Core Palette	The Tints and Shades Palette	The Grays Palette
<p>These are three distinct colors that can be used to identify a space for a company, a department, a product, or a specific activity.</p> <div><div>PageArchitectTheme</div><div>Content</div><div>Palette</div><div><div>Core</div><div>Primary#39b1ca</div><div>Secondary#602b3a</div><div>Accent#9b2b3a</div><div>Tints and Shades</div><div>Grays</div></div></div>	<p>This palette defines light, medium and dark tints /shades that coordinate with the Core Palette.</p> <div><div>PageArchitectTheme</div><div>Content</div><div>Palette</div><div><div>Core</div><div>Tints and Shades</div><div>Dark#283133</div><div>Medium#777</div><div>Light#D1E5E3</div></div></div>	<p>This palette of white, light gray, medium gray, dark gray is used to provide emphasis and var</p> <div><div>PageArchitectTheme</div><div>Content</div><div>Palette</div><div><div>Core</div><div>Tints and Shades</div><div>Grays</div><div>Dark Gray#808284</div><div>Medium Gray#DEDFE0</div><div>Light Gray#F3F4F5</div><div>White#FFFFFF</div></div></div>

- The palette options are displayed directly below the color picker in any color selection context, within the [Theme Press Designer](#).
- Additionally, the palette options are the first options in the Confluence editor color picker.
- Creating these color palettes does not prevent users from choosing other colors.
