

Defining and Using Fonts

Requires

THEME PRESS

Defining and Using Fonts

Prompt

Using custom on-brand fonts throughout your site.

Outcome

In [Theme Design](#), defining fonts for your site's text, including paragraphs, headings, and tables, is a key step in locking in an overall look and feel.

Typography, through thoughtful font selection, can go a long way to help reflect your company's brand and culture, improve ease of use and readability, and generally increase the effectiveness of your site.

After [defining your theme's font families](#), you can then determine where each font will be applied.

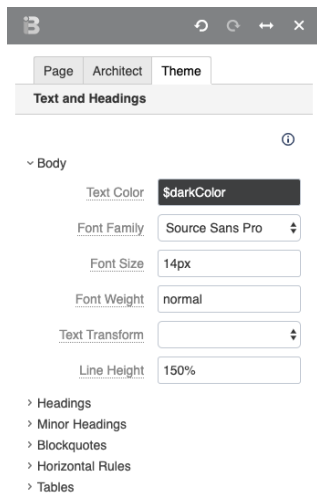

Steps

Defining Fonts for Text and Headings

In the **Theme** tab of [the Theme Press Designer](#), under **Text Headings**, you have the ability to make font selections for each type of text.

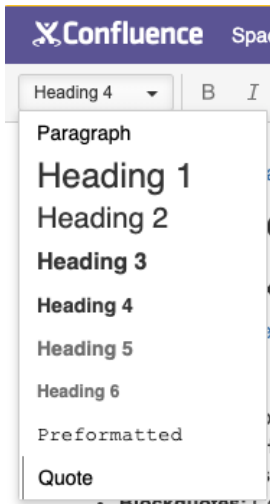

Assign a font family for each of the following:

- **Body:** The text of each paragraph
- **Headings:** H1, H2, H3 and H4
- **Minor Headings:** H5 & H6
- **Blockquotes:** Content of blockquotes
- **Tables:** Table Headings & Table Content

Using Fonts

After defining fonts in your theme, you'll now have access to these when using the Confluence [content editor](#). Changing the selection from the text style dropdown in the upper left-hand corner of the editor will pull in your defined font choices.
