THEME PRESS

Designating a Block for Meta Properties

Prompt

Identifying a block for key [Meta Property](#) information.

Outcome

Theme Press will pull information, such as titles and images, from any block on a page that is identified for Meta Properties. In turn, this information is used for [Rich Link](#) display. (Two blocks designated? Theme Press will use the first block on the page identified as such.)

Steps

Open the [Theme Designer](#), and select the **Page Tab**.

Click on your chosen block, and open the **Handling** accordion

Theme Press Control Panel Page Tab Block Handling

Check the box next to **Meta Properties**
