Designating Links as Rich Links

Prompt

Methods for implementing hyperlinks with rich content previews.

Outcome

There are several options in Theme Press to designate a link for [Rich Link](#) preview. You can do so via the [Designer](#), as well as with various macros.

(Looking for what gets served up from those links? Check out [Managing Rich Link Preview Content](#).)

Steps

Using Macros

Several Briket Macros, listed below, have a toggle option to display links as rich links.

To do so, click the "Display as Rich Links" option in the macro parameters. (Other Rich Link-related toggle options include displaying site/space favicon and name.)

Macros with Rich Link Capability

Theme Press

- [Attachment List Macro](#)
- [Children List Macro](#)
- [HTML Link Macro](#)
- [Rich Link Macro](#)

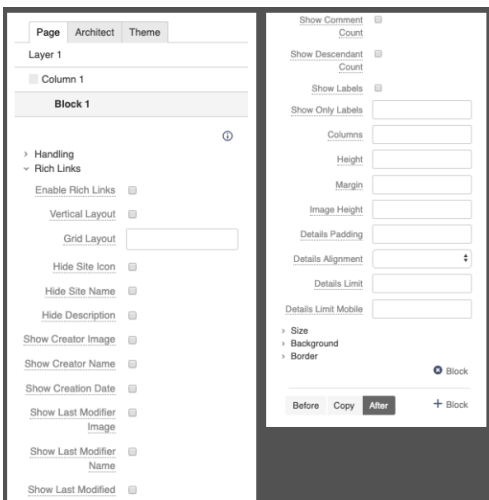

Targeted Search + Theme Press

- [Content Query Macro](#)
- [Targeted Search Link Macro](#)
- [Targeted Search Field Macro](#)
- [Interactive Search Macro](#)

Using the Designer

Links can also be styled as rich links on a block-by-block basis. This is done in the [Designer](#) by enabling **Rich Links** under the Rich Link expander on the containing block. When selected, all links inside the chosen block will be displayed as Rich Links. (This is not needed if they are already being rendered by Briket macros, as above.)

Many other design options are included in the Rich Link expander to help fine-tune display.
