Defining Font Families

Defining Font Families

Prompt

A first step to working with fonts in your theme.

Outcome

Inserting font family notation in the Theme Designer allows you to apply these fonts throughout your theme, and use them consistently across page and space design.

Steps

Navigate to the Font area of the Theme Designer.

Theme Press Designer Theme Tab Content Fonts Choices Font Families
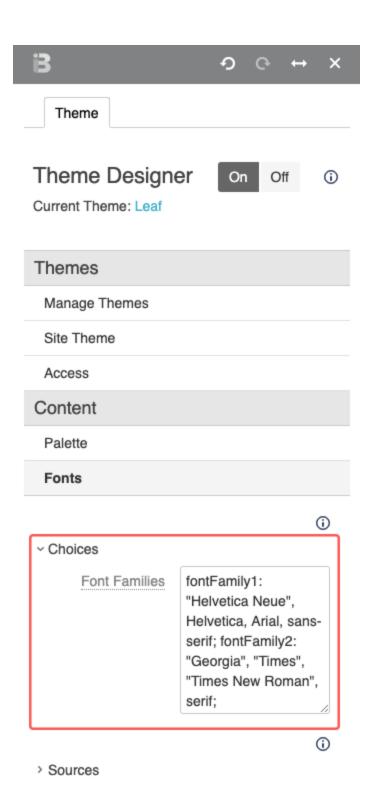

Insert naming for each font family, separated by a semicolon.

The font family list is also referred to as a Font Stack.

Format
| ```
fontFamily1: "<font name 1>", "<font name 2>", "<font name 3>";
fontFamily2: "<font name 1>", "<font name 2>", "<font name 3>";
``` |

Example
| ```
fontFamily1: "Helvetica Neue", Helvetica, Arial, sans-serif;
fontFamily2: Georgia, Times, "Times New Roman", serif;
``` |

- Font names with one word do not need quotes.
- You can add additional families as needed.
- Multiple font weights and styles can be referenced under one family name.

Note

Tip

> ✅ **Best Practice**
>
> Use highly readable fonts that render well in all browsers.

Warning

Info

 If would like to define font families that are not on your user's computers, you will need to add web fonts to your theme (or embed them).
