Creating Links

Creating Links

Prompt
Linking to pages and other content across your site.

Outcome

Steps
Adding a Link

Navigate to "Insert Link" in the Confluence Editor.

From there, you can link an Internal or an External link by:

- searching for an existing link
- searching for recently viewed page
- searching for files
- searching for a web link
- inserting a link into page using wiki markup

In all cases, the editor allows you to modify the displayed **Link Text** before you select **Insert.**

Removing or Modifying Links

Select the link text on a page.

- To remove:
  - click on the link and select **Unlink** from the link properties toolbar
- To edit:
  - click on the link and select **Edit** from the link properties toolbar and choose **Save**

Note

Tip

- Learn more: Insert Links and Anchors from Atlassian Documentation
- Insert links to other site pages via the editor or the keyboard shortcut (instead of using the full URL). This ensures the link will be updated if the page moves, or the title is updated.
  - The **insert link** keyboard shortcut is K
