Architect Pages

Prompt

Underlying 'control' pages, which help shape, configure, and contribute content.

Definition

An architect page is the location of one of the five primary types of site structures listed below — both where the structure resides and where it is managed. When you create a menu, for example, you [create a menu architect page](#).

Each architect page adds structure and content to **page display** across a site. Architect pages can be set to be used across the entire site (a site default), at just the space level, and in some cases, at the individual page level ([page design architect pages](#)). All architect pages reside in the [Theme Press Default Space](#).

Type	Purpose	Level
Banner	Displays system messages above the Confluence Header	Site, Space
Header	Displays content in the header	Site, Space
Menu	Provides site/space navigation in the header	Site, Space
Layout	Defines page structure and, potentially, content	Site, Space, Page
Footer	Displays content in the canvas footer	Site, Space
