Live Blueprint Macro

Relates To

Live Blueprint Macro

Prompt
Used to retrieve a Live Blueprint and have it show up on the page.

Definition
This macro allows a user to reuse a blueprint and its substitution fields on pages throughout a site. When the blueprint is subsequently updated, every page using that live blueprint will automatically be updated.

Info

ⓘ Because Live Blueprints are not accessible in the Blueprint Menu, the Live Blueprint Macro is the only way to reference Live Blueprints. You can use multiple Live Blueprint Macros on a page, each with its own unique data if substitution fields were used in the Live Blueprint.
