Formatted Date Macro

Prompt

Represent a custom or generated date in a standardized form.

Definition

A simple way to present a date in a standard representation (such as YYYY-MM-DD or MM/dd/YYYY).

This macro can also be used to automatically generate built-in Confluence dates, such as the **page creation** and **page modified** dates. The date is presented inline, meaning when used in a paragraph of text it will appear alongside the text without adding a new line.
