THEME PRESS

HTML Wrap Macro

Prompt

Control how text is displayed around an inserted graphic.

Definition

This macro is used to create a <div> or around content. It has many functions, including controlling how text is displayed around an inserted graphic (see examples). It's also used to construct [expanding content](#).

- Ability to style the results by:
 - using a CSS ID or CSS Class
 - setting the height, width, margin, and padding
 - add a background color
 - select background image and set location
 - set a border
 - define position of the wrap in relation to the block in which you apply it
 - set the "clear" parameter to define how floating elements left/right of the HTML wrap are displayed
 - use the "hide" parameter to toggle visibility fo the wrap content and effects.
 - use this in conjunction with the Restrict Content Macro when displaying a consolation prize
