Pages How To

FAQs

Yes! There are more than three-dozen macros included in BrikIt's product suite. Check out our [Macro Reference](#) page for an overview. We also recommend reading [Adding Macros to a Page](#) to help you get started with them.

The best place to start is our [Creating a New Theme](#) page. From there you can move on to editing and applying themes.

You bet! BrikIt has integrated its own keyboard shortcuts with the Confluence shortcuts. To see what keyboard shortcuts are available, visit [Accessing the Keyboard Shortcut Window](#).

Yes, you can! BrikIt created the Rotate Content Macro for this purpose. Learn more about [Displaying a Gallery of Rotating Content](#).

As with links and other elements, you can beautify your site by [Adding Style and Functionality to Buttons](#).

Of course! BrikIt's Theme Press offers a wide range of branding and styling options, including [Using Custom CSS and JavaScript](#) in your themes.

Look no further than [Building Menus](#), our definitive how-to entry on the topic.

[Styling Links](#) is one of the reasons we created Theme Press. We feel that all website elements in your Confluence environment should be beautiful, branded, and fully functional to suit your needs.

Page layouts ([page designs](#)) are a key component of BrikIt Theme Press. They are used to control the appearance of elements like the breadcrumbs and page title. We recommend reading [Creating a Layout](#) to get started.
