Designing an Information Architecture That Scales in Confluence

Designing an Information Architecture That Scales in Confluence

Webinar graphic - Desktop
If you're launching or managing a digital workplace with complex information needs, join us at **11AM PST** on **January 14th** and learn how Brikit uses Information Design to tame and scale Confluence, ensuring immediate and long-term success.

In this 45-minute webinar, we'll share the techniques we've developed and proven with user communities ranging from a hundred to a hundred thousand. You'll learn the five pillars of Information Design and supporting best practices.

In addition, we'll present example architectures, show how to document and solicit feedback on your Information Design, and review key risk management techniques.

Meet the Presenter

Andy Donovan

Information Architect

Andy is an Information Architect for Brikit. He holds a degree in Philosophy and a Master's of Library and Information Science, and has more than 15 years' experience designing and enhancing information systems for corporate, academic, and non-profit organizations, including the Boeing Company, the Allen Institute for Brain Science, and the State of Minnesota. Andy embraces the identity of the 'Cybrarian' — a Librarian who uses technology and design to help connect people with information. To this end, he's used taxonomies, ontologies, wireframes, Python, Java, RDF, and Brikit! to create knowledge spaces for enquiring and innovative minds. Off screen, you can find Andy in a heavy metal parking lot, the line at the cinema, or at the trailhead, staff in hand.
