

Installing Content Flow

Relates To

CONTENT FLOW

Installing Content Flow

Prompt

Installing Content Flow through the Universal Plugin Manager

Steps

Prerequisite: Configure Mail Sever

Content Flow sends emails to workflow participants when a workflow step is in need of review or approval. For these Content Flow notifications to work, you must first configure the mail sever for Confluence. Follow [these instructions outlined by Atlassian](#) to set up your mail server.

Install Content Flow

Follow the installation steps on [Installing and Uninstalling Apps](#)

- (For step 4, type Content Flow in the app search box)

Create a Workflow

Now that you are configured and installed. It's time to start using Content Flow. Start by [creating a workflow](#). Enjoy!

Note

Good to Know

- [Installation of Atlassian Confluence](#) is a requirement for Content Flow installation. (Content Flow is a Confluence app).
- The "Workbox - Host Plugin" must be enabled. In the Manage Apps screen, choose the "System" filter, to search for and enable all of the Workbox apps.
- Check the [Content Flow Releases](#) page for compatibility information and download links
