

Migrating from Zen to Theme Press

Requires

THEME PRESS

Migrating from Zen to Theme Press

Prompt

Moving your content from Zen Foundation to Theme Press.

Outcome

Successfully transitioning your content requires migration of all of your Zen pages, brands, macros, and other settings. To facilitate this process, we have created the Zen Migrator add-on, available by request via our normal support process.

Note

Tip

Warning

Info

Version Requirements

Zen Foundation 5.2.16 (or higher) and Theme Press 1.1.7 (or higher) are required to complete the migration.

Caution

Looking to upgrade to Confluence 7.x? Due to compatibility issues, it is important to **migrate from Zen to Theme Press BEFORE upgrading Confluence.**

Basics

The Basics

Before beginning migration, we recommend familiarizing yourself with the concepts below.

As you move through the process, the migrator takes note of:

- Zen's application on a site-wide and space-by-space basis
- Any spaces using themes other than the default
- Any spaces using layouts other than the master

When you migrate, your Zen pages become Theme Press architect pages. The migrator creates an architect page for each header, layout (page or blog), menu and footer page in your site. For each admin-notice page, the migrator creates a banner page.

Layouts Overriding Master Layouts

The migrator also creates a Theme Press layout page for any Zen layout overriding the master.

What were called **brands** in Zen Foundation are now called **themes** in Theme Press. Migrating involves creating a Theme Press **theme** for each Zen **brand** that is not a built-in **brand**.

Both Zen and Theme Press allow you to set a default **theme** (brand). Likewise, you have defaults for Zen and **architect pages**. You do not need to map your defaults from Zen to Theme Press. The migrator sets them for you.

The migrator also looks for any spaces using a brand or Zen page other than the default, including layouts overriding the master. The migrator applies these overrides accordingly in Theme Press.

Macros available through Zen differ from those in Theme Press. In some cases, Theme Press offers equivalent macros. When available, you can use the migrator to convert Zen macros into Theme Press macros. When not available, you must manually change or remove Zen macros. See our [Zen Macro Migration](#) for more information.

After migrating, manually [add your custom CSS and/or JavaScript](#) to Theme Press. You may need to update this code.

Theme Press does not support cascading menus. Therefore, Theme Press ignores any second level items in migrated menus. Try [panel menus](#) or secondary menus instead.

Getting Started

Getting Started

Accessing the Migration Page

Once you install the Zen Migrator App, complete the following:

1. Navigate to **General Configuration** under the [Confluence Administration Menu](#).
2. Locate the **Zen Migrator** section on the left.
3. Click the **Migrate Zen Foundation to Theme Press** link.

Monitoring Your Progress

As you move through the migration process, a log appears to the right of the screen. Use this section to monitor your progress and any issues that may arise. You can download these logs if necessary.

Before running on your production server:

- Verify results in a test environment
- Ensure you have a valid backup

1. Select Migrator Scope

Process all spaces, or just those that are configured to use the Zen Foundation theme.

All Spaces

Spaces Using Zen

Do the actual migration, or just create an audit report to assess the scope of the migration.

Migrate

Audit Only

2. Migrate Zen Pages

Click the following button to migrate all Zen pages into Theme Press archived pages, and assign the appropriate archived pages per space.

Migrate Zen Pages

3. Migrate Pages Overriding Zen Masters

Click the following button to migrate all pages that override the Zen Master layouts. This will create Theme Press layouts and apply those layouts to the appropriate pages.

Migrate Pages Overriding Zen Masters

4. Migrate Brands

Select one or more brands then click the button to migrate your Zen brands into Theme Press themes.

Migrate Brands

Select All

5. Migrate Zen Macros

Click the following button to find pages using Zen macros. Once found, click **Q** to

Extra Title

Running the Migration

Steps

Select Scope

Before initiating any steps, you should set the scope of the migration. First, determine if you want to migrate all spaces or Zen-only spaces. Select all spaces if:

- all spaces in your site use Zen
- some spaces use Zen and other spaces formerly used Zen
- some spaces use Zen and other spaces contain pages using Zen macros

Next, select a processing mode: **migration** vs. **audit**.

- **Migration** mode completes the conversion during each step.
- **Audit** mode simulates the conversion and generates an audit log.

Migrate Zen Pages

During this step, the migrator replicates each Zen page as a Theme Press [architect page](#). Afterward, the migrator assigns a site default for each type of architect page (banner, header, menu, layout, footer). Additionally, the migrator looks for any space overrides and applies those pages accordingly. (Admin-notice pages are converted to **banner** architect pages.)

Migrate Overriding Layouts

For each unique Zen layout that overrides the master, the migrator generates a Theme Press layout page. In other words, if two or more Zen pages use the same type of layout, the migrator creates only one layout page in Theme Press. The migrator also applies these layouts to the appropriate pages. (In Theme Press, layouts are found in the [Theme Press Default Space](#).)

Migrate Brands

You have the option of migrating Zen brands to Theme Press [themes](#). Just select the appropriate brands. Note, you cannot migrate built-in brands. (In Theme Press, themes are located in the [theme tab](#) of the [Theme Press Designer](#).)

Migrate Zen Macros

During this step, the migrator finds all pages using Zen macros. Upon building the list, you'll see a blue action circle ([blocked URL](#)) next to each macro that is ready for conversion. Click this icon to replace the Zen macro with a Theme Press equivalent. You must manually convert or remove all other macros.

You can find a full list of Zen Macros and their Theme Press equivalents [here](#).

When in audit mode, be sure to click the blue action circle ([blocked URL](#)) for the following macros:

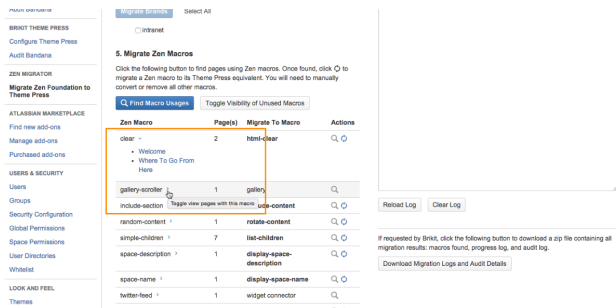

- include-section
- simple-space-list
- zen-section

This step adds helpful information to the audit logs.

How do I find pages using these Zen macros?

Click the blue arrow next to the name of each Zen macro that shows results.

Apply Theme Press

Now that you've migrated your brands and Zen pages, you should apply Theme Press and the resulting themes. For each space, migration involves:

- applying Theme Press as the site or space theme
- assigning a site default theme
- assigning any themes that override the site default

Built-in Brands

If using a built-in brand as the default, the migrator sets the Theme Press default theme to [Splash](#). This step is necessary because you cannot migrate built-in brands.

Create and View Punch List

As you complete this conversion, the migrator builds a list of items you should review and fix.

Punch List Manual Changes

Once you generate the punch list, you'll see several items that require manual changes, involving migrated brands, as well as pages and [layouts](#).

Migrated Brands

When migrating a brand, the punch list shows tasks for brand settings that (1) need review or (2) cannot be migrated. Each item shows a brand setting reference that begins with a dollar sign (\$).

Pages and Layouts

When viewing the punch list, review the following tasks related to pages and layouts:

- check layout format
- review layout (floating sections)

The punch list provides a link for each page that may need adjustment. Most likely, these pages previously contained floating or tabbed sections.

In Zen, columned sections are referred to as floating sections. Each floating section migrates into its own layer/column/block when migrating to Theme Press. If a Zen page contains two floating sections (section 1 and section 2), the migrated Theme Press page will then contain the following:

- one layer/column/block for section 1
- another layer/column/block for section 2

Each tabbed section migrates into its own layer/column/block. Note: In Theme Press, while tabbed blocks on 'normal' content pages work much like Zen, you cannot create tabbed blocks on Theme Press [layout](#) pages.

Adding Columns and Layers

You may need to adjust affected pages so that content appears in columns, either by adding additional columns to a layer or creating a new layer (with desired number of columns). Once you create new columns, drag and drop your content into the appropriate areas.

Tip

Need help with your punch list?

[Contact Brikit Support](#)

Warning

Before migrating your production server, be sure to:

- Verify your results in a test environment
- Backup your site and verify the validity of the backup

Disabling Zen

We recommend you disable Zen Foundation upon completing the migration steps and checklist. Once you determine the migration is successful, uninstall the add-on.
