

Release

Relates To

CONTENT FLOW

Release

Prompt

Allow a [scheduled page](#) to be viewed by everyone.

Definition

When using the Content Flow [Publisher](#), you may choose a date and time to automatically update the page restrictions so that the page becomes viewable by users with view-only permissions. This is what it means to release a page. A page's release date is established by setting the [Release Time](#).

By contrast, [hiding](#) a page means that the restrictions are updated to remove visibility from these view-only users.
