

Creating a Footer Architect Page

Requires

THEME PRESS

Creating a Footer Architect Page

Prompt

Formatting a page to hold a site-wide or space-wide [footer](#).

Outcome

A key navigational feature of Theme Press is the ability to add footers to assist users in quickly finding key content. Underlying any footer in Theme Press is an [architect page](#), housed in the [Theme Press Default Space](#), titled with the `.brikkit.footer` notation.

Steps

On any page, open the Footer accordion from the Space Tab*

Theme Press Designer Space Tab Footer

Open the Create expander

Insert a name for the new footer

Click + Footer

Your footer is now available for use — site wide, or for individual [spaces](#).

Note

The **Space Tab** was previously called the **Architect Tab**. (versions earlier than Theme Press 3.0.2)
