Exporting Spaces

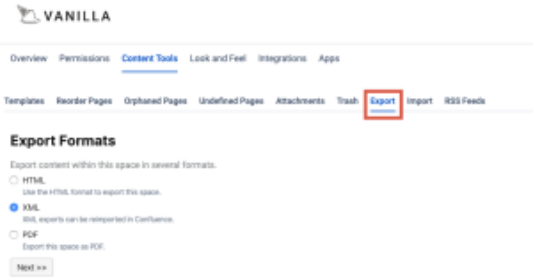

Exporting Spaces

Prompt
Exporting Confluence spaces from your environment.

Outcome
When moving a site designed in Theme Press from one environment to another (such as from staging into production), you will need to export any spaces containing content (using the XML format).

Steps
Navigate to the space you wish to export

Choose Space Tools from the sidebar, then select Content Tools

Select the Export tab

Choose format of export

Select XML.

Select type of export

You can choose to export a full space export, containing all the pages in the space, or you can choose a custom export if you want to export selected pages only.

Click Export

When the export process has finished, you can download the zipped archive.

Note
