Downloading Architect Pages

Requires THEME PRESS

Downloading Architect Pages

Prompt

Exporting architect pages from your environment.

Outcome

When moving a site designed in Theme Press from one environment to another (such as from staging into production), you will need to move the supporting architect pages.

Steps Navigate to any Architect Page

Open the Download / Upload expander in the Space Tab of the Theme Designer

Theme Press Designer Space Tab Download / Upload

Choose which pages you would like to include

Check the box next to any architect pages needed in your export. Note the **Select All** option.

Click the Download button

A zipped file of your selected architect pages will now download.

Note

If you already have a same-named architect page zip in your downloads folder, your operating system will likely add a number to the naming of the new copy. You will need to remove this extra number before uploading, in order for Theme Press to recognize the import.
