Using the Expand Macro

Using the Expand Macro

Prompt

Implementing a lightweight page-design option for 'hiding' text behind a click-to-open teaser.

Outcome

This standard built-in Confluence macro offers an easy way to hide information with a "click to expand" text snippet until it's needed by the user.

Steps

Insert the Expand Macro

Adapt the title (teaser text) to your needs

Add content inside the macro

Example
Your hidden content goes here.

Note

Tip

Shortcut Key

In the edit window, hit the left curly bracket to add a macro on the fly.
