

Uninstalling and Removing Theme Press

Requires

THEME PRESS

Uninstalling and Removing Theme Press

Prompt

Completely removing Theme Press requires these additional steps.

Outcome

Alas you may decide to remove Theme Press from your Confluence environment. Simply [uninstalling it](#) from the "Manage apps" (UPM) admin screen does not delete themes, space settings, architect pages/content, and macro content. Follow these steps to remove Theme Press and replace its macros.

Steps

Uninstall Theme Press

Follow the instructions described at the bottom of [Installing and Uninstalling Apps](#).

Create the following user macros

Theme Press uses the following hidden macros to hold content:

- content-layer
- content-column
- content-block
- content-layout

When you disable or uninstall Theme Press, these macros no longer function, and you may find content missing. To remedy this issue, [create a custom user macro](#) for each of these macros. Use the table below to create each macro, the field names at left correspond to the fields found on the create user macro page.

	Content Layer	Content Column	Content Block	Content Layout
Macro Name	content-layer	content-column	content-block	content-layout
Visibility	only to system administrators	only to system administrators	only to system administrators	only to system administrators
Macro Title	Content Layer	Content Column	Content Block	Content Layout
Macro Body Processing	rendered	rendered	rendered	no macro body
Template	## @noparams \$body	## @noparams \$body	## @noparams \$body	## @noparams

Create and save each of these user macros. Because they use the same Macro Name, these will replace the four previously embedded Theme Press macros.

Delete the Theme Press Default space

If you are absolutely certain about completely removing Theme Press, and want to remove all of your architect pages and their content (including headers, banners, menus, footers, and layouts), then proceed with deleting the [Theme Press Default space](#). You cannot undo this action.

Note

Tip

Warning

Duplicate macro warning

If you reinstall Theme Press, be sure to delete the custom user macros from Step 2 above.
