## Featured Improvements

### New Search Panel replaces the Advanced Search page

The search panel slides in from the right side of the screen and presents [a fully-featured interface for searching and filtering content](#). It also includes the ability to search Confluence's native search and to [search using the Confluence Query Language \(CQL\)](#).

### Subcategories for deeper levels of filter organization

Targeted Search filters are Confluence labels with [special enhancements for labeling, searching, and retrieving content](#). With Targeted Search 3.0, you can organize filters into nested levels using [filter subcategories](#). This is a [great solution for managing naturally hierarchical kinds of filters](#), like geographic locations and scientific taxonomies. You can also 'promote' filter groups and filters to [prioritize their display in the search panel](#) and label application window.

### Automatically "cascade" filters to child pages

By right-clicking a filter on a page, you can [automatically apply that filter to the page and all of its child pages](#). Any new child page created will automatically be tagged with that [cascaded filter](#).

### Customize the 'look and feel' of the Search Panel

If you have both Targeted Search and [Theme Press](#) installed, then you can [style the search panel according to your brand and theme](#).

### Additional Configuration Options

In the new [Targeted Search Configuration Page](#), you can enable and disable the [use of stylized rich links](#), give permission to non-system admins to [manage the taxonomy](#), and customize tooltip text and other display options.

### Many new design and configuration options and improvements

See the full list below.

## Jira Issues

| Key | Summary                 | T | Status |
|-----|-------------------------|---|--------|
| Lo  | <a href="#">Refresh</a> |   |        |
| adi |                         |   |        |
| ng. |                         |   |        |
| ..  |                         |   |        |
