Toggling, Pinning, or Hovering the Theme Press Navigator

Requires

THEME PRESS

Toggling, Pinning, or Hovering the Theme Press Navigator

Prompt

Configure the Navigator to open and display in a way the best suits your desired user experience.

Outcome

The Theme Press Navigator is a customizable, stylish alternative to the Confluence Sidebar. The Navigator is defined as a page element of your Theme Press Page Design. It can be set to be opened by default, opened on hover, or hidden, and toggle-able via hotkey. So wherever a Page Design is used, either space-wide or on a particular page, that is where the Navigator will be used and according to the setting you define.

Steps

Open the Theme Press Designer

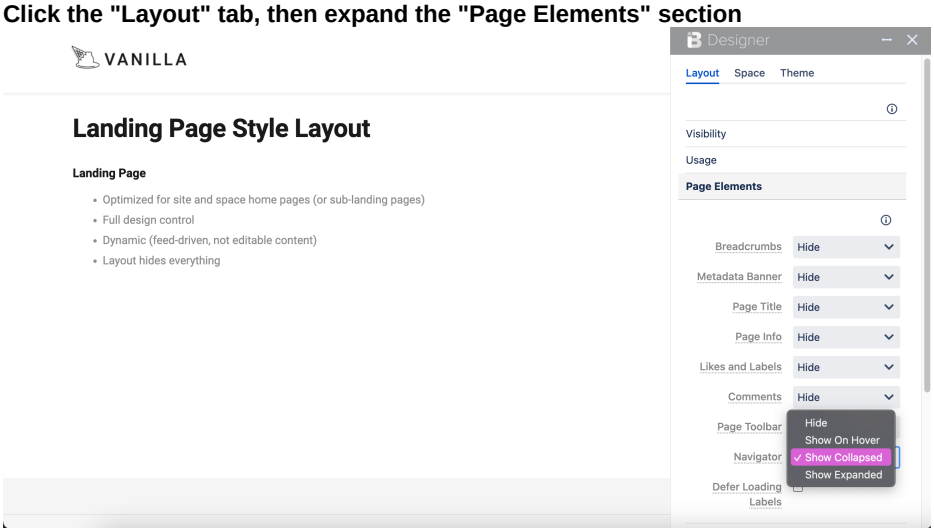
Use the "." (period) hotkey to toggle open the Designer.

Locate the Page Design, click the eyeball icon to view it

If you are using the space default page design, click the "Space" tab and open "Page Design". If the page is overriding the space default, then click the "Page" tab and click Page Design. Locate the selected page design. Clicking the eyeball icon will open the architect page in the Theme Press Default space.

On the Page Design architect page, open the Theme Press Designer

Click the "Layout" tab, then expand the "Page Elements" section



Select your Navigator setting

Choose between the following settings:

Option	Description	Toggle with "z" key?
Hide	The Navigator is completely hidden and not accessible via hotkey.	✗

Show on Hover	The Navigator hugs the left side of the screen as a sliver and expands on hover. Click the circle-arrow icon to pin open or shut. 	✅
Show Collapsed	The Navigator is hidden but able to be opened and closed with the "z" hotkey.	✅
Show Expanded	The Navigator is open by default, but able to be closed and hidden with the "z" hotkey. 	✅

On refresh, your settings are saved for this page design

Wherever this page design is used, the Navigator setting selection will be available for that page.
