

# Configuring a Space to use the Default Confluence Theme

Requires

THEME PRESS

# Configuring a Space to use the Default Confluence Theme

## Prompt

Override global theme settings and set individual spaces to use the default Confluence theme.

## Outcome

Replace me with a more complete explanation of what this how-to accomplishes.

## Steps

### Open the **Confluence Sidebar** and click "Space Tools"

You must be a **space or system administrator** to perform this action. Can't find the Confluence Sidebar, [toggle open the Confluence menus using a hotkey](#).

### Select "Look and Feel"

### In the Themes Tab, select "Brikit Default Theme"

The Themes tab may already be open after clicking "Look and Feel".

The screenshot shows the 'Themes' tab in the Confluence sidebar. On the left, there's a 'Current Theme' section showing 'Brikit Theme Press' which 'Transforms Confluence to create engaging intranets, portals, knowledge bases, websites, and more.' Below it, a 'Choose New Theme' section lists two options: 'Global Look and Feel' (unchecked) and 'Brikit Default Theme' (checked). A 'Help Tips' sidebar on the right provides information about themes as plugin modules and their application across spaces. At the bottom, there are 'Find more themes...' and 'Confirm' buttons.

### Click "Confirm"

The page will refresh and the space will revert to the Out-of-the-Box Confluence look and feel.
