

Tracking Page Activity with Content Flow

Requires

CONTENT FLOW

Tracking Page Activity with Content Flow

Prompt

Set up simple and powerful page analytics to help you understand usage.

Outcome

Enable Page Activity in a space in order to see which pages are being viewed (and not viewed) in a given set of days.

Steps

Open the [Confluence Sidebar](#) and click "Space Tools"

You must be a [space](#) or [system administrator](#) to perform this action. If using Brikit Theme Press as well, [toggle open the Confluence menus](#) to access the Sidebar.

Select "Overview"

Navigate to the "Apps" tab

Click the "Page Activity" sub-tab

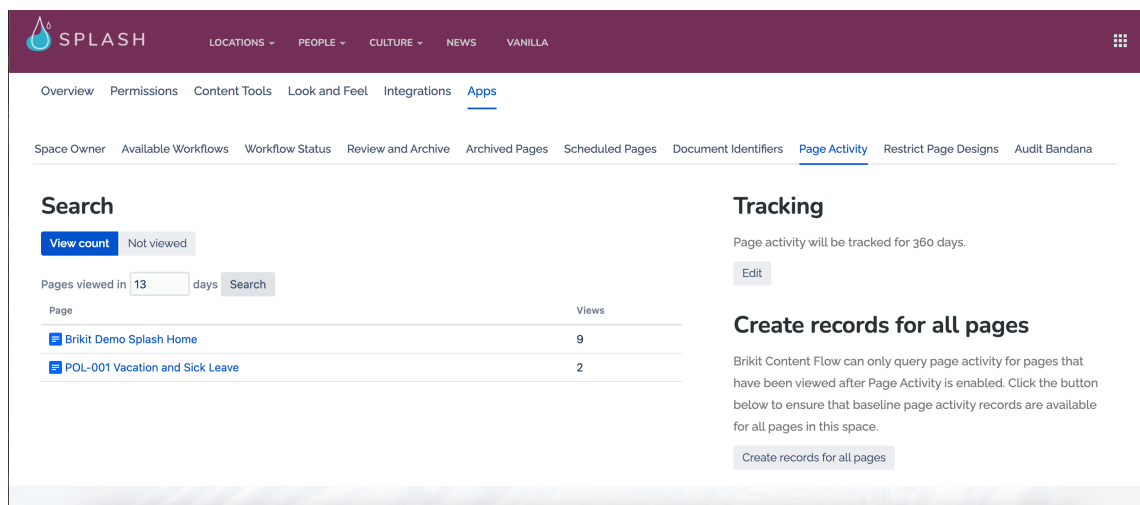

Click to "Enable Page Activity"

Specify the number of days to track activity

To be able to see page views for the last year, enter 365. Content Flow will only track data for this length of time. For example, if you set the number to 365 then each new day will overwrite the entry for the day from 365 days ago. In this way, a full 365 days of prior activity is always preserved.

Create reports to see Page Activity

Click "View count" or "Not viewed", enter the number of days, and click "Search". This will return a list of pages in the space that have been viewed (or not viewed) since the days you specified, along with their view count.

The screenshot shows the 'SPLASH' space in Confluence. The 'Apps' tab is selected, and the 'Page Activity' sub-tab is active. The 'Search' section on the left allows filtering by 'View count' (selected) or 'Not viewed', with a search range of 13 days. A table lists two pages: 'Brikit Demo Splash Home' with 9 views and 'POL-001 Vacation and Sick Leave' with 2 views. The 'Tracking' section on the right indicates that page activity is tracked for 360 days. Below this, the 'Create records for all pages' section explains that Brikit Content Flow can only query page activity for pages viewed after Page Activity is enabled, and provides a button to 'Create records for all pages'.

Page	Views
Brikit Demo Splash Home	9
POL-001 Vacation and Sick Leave	2

Note

Create records for all pages

Brikit Content Flow can only query page activity for pages that have been viewed after Page Activity is enabled. Click the "Create records for all pages" button on the Page Activity page to ensure that baseline page activity records are available for all pages in this space.
