

Adding the Navigator to a Page Design

Requires

THEME PRESS

Adding the Navigator to a Page Design

Prompt

Enable the [Navigator](#) sidebar for use on a [layout](#).

Outcome

Edit a layout's page elements section to show the Navigator on all pages that use that layout.

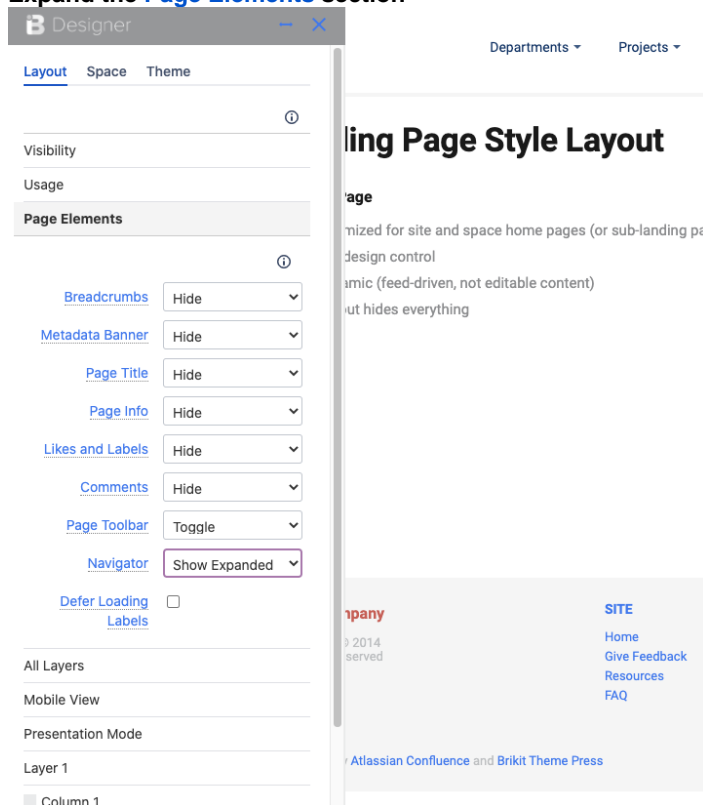

Steps

Create a layout

A Theme Press layout (or Page Design) is the [structure](#) to which the Navigator is attached. You'll first need to create a layout (or [edit an existing layout](#)).

Open the [Theme Designer](#) and click the **Layout** tab

Expand the [Page Elements](#) section

Next to the Navigator field, change the selection

Learn more about [Toggling, Pinning, or Hovering the Theme Press Navigator](#). In sum: select "Show Expanded" to have the Navigator open by default on any page that uses this layout. By contrast, select "Show collapsed" to keep the Navigator out of view by default, but able to be toggled open using the "z" key. To ensure that there is no Navigator present for this layout, just select "Hide".

Allow the Layout page to refresh to express your changes

That's it! Any page or space set to this Page Design (layout) will have the Navigator enabled. It's a great alternative to the Confluence Sidebar, which can be safely hidden away with the "shift" and "z" keys.
